

“Working in partnership with CAI we were able to provide quality IT solutions to the people of Delaware.”

“Computer Aid (CAI) was able to provide us with the required technical resources and environments to complete the application life-cycle in Internet time. The site had to be effective and user-friendly, and it had to be developed quickly. CAI came back with a prototype in seven days.”

Tony Collins, *State of Delaware’s Office of Information – Manager of Web-based Applications*

“CAI did an exceptional job aiding the Office of Information Services (OIS) in creating a fully functional Mock Election Web application in an extremely short time frame. Without CAI’s skilled resources, the project would not have been possible. There were key CAI personnel who proved invaluable to the process and who were on site during the three-day window of the election.”

Terry Reed, *OIS, Project Lead*

The State of Delaware’s Office of Information Services, located in Dover, Delaware, was asked to provide a Web-based application for the state’s school children to participate in a mock election as part of a national voter education project. Delaware students in grades 4 through 12 in 180 schools were allowed to participate in an online election, resulting in over 185,000 ballots cast for national and state candidates.

Working in partnership with CAI to develop this web site, OIS delivered a quality IT solution for the students and their parents. OIS prepared the specifications, and CAI completed the prototype and program development, while OIS tested and implemented the applications for the first Internet-based “Mock Election” in Delaware.

Strategic partners for global success.
